How to use

1. Stick one marker on each face of the cube. Any face, any way up.
   Roughly centred, flat, and keep the white border.
2. Start the app and turn the cube slowly in view for 20-30 seconds,
   so every face is seen together with a neighbouring face.
3. That's it: the app learns the layout and cube size and remembers them.
   If you move a marker later, it relearns that marker on its own.
